Staff Level

Position Title	[Remote] Backend engineer (Go, Kotlin, Java, Ruby, Python)
Recruiter Company	WORKPORT, inc.
Company Name	Company name is private
Activated / Updated	2024-04-08 / 2024-04-08
Job Type	IT (PC, Web, Unix) - Back-End Engineer IT (PC, Web, Unix) - Programmer
Industry	
Location	Asia Japan Tokyo
Job Description	<p>[Job summary] You will be in charge of the company's web engineer (backend).</p> <p>[Job details] With the rapid growth of the service, there are many functions that we would like to develop from a business perspective. There are many things we would like to do in terms of system improvements that will contribute to increasing the speed of feature development over the medium to long term, and we would like you to take ownership of these feature development and system improvements.</p> <p>In addition, in order to proceed with the above development in a small organization, there are many situations in which new technology research and introduction and function development must be carried out quickly and appropriately, and we believe that this requires a high level of technical ability and self-propelled ability. I'm here. I believe that our current team members are able to achieve this goal, and we would like to continue to expand our engineering organization while maintaining this high level.</p> <p>Therefore, I would be very happy if we could work together to create an organization where we can share what we think are problems and make improvements as a team, such as establishing a team development system and creating a development team culture.</p>
