Industry	
Location	Asia Japan Tokyo
Job Description	Plans and coordinates all aspects of projects from initiation through delivery. Manage customer expectations, project scope, and resources needed to successfully deliver to customer needs. Develop, manage, define, and execute project plans, project scope, activities, schedules, budgets, forecasting and deliverable to deliver technical and consulting services. Lead hybrid employees and subcontractor resources to deliver projects on time and within budget. Maintain end-to-end accountability for customer satisfaction and overall delivery excellence. Manage multiple and conflicting priorities in a timely and sensitive way, with full transparency to leadership. Initiate, build and sustain productive relationships. Coach, mentor, motivate, and supervise project team members and contractors and influence them to take positive action and accountability for their assigned work. Ensures requirements for internal technology projects align to operational standards. Develops alternate requirements or document exceptions as appropriate. Interacts with product development, sales, client relationship teams, technology solutions, service delivery and/or other cross-functional teams. Coordinates activities and tasks among project team members, other internal departments and client or vendor/subcontractor organizations as needed to meet project goals and ensure project completion is on schedule, within budget constraints and of the appropriate quality standards for the project scope. Assigns and monitors work of project team providing technical and analytical support and direction. Interfaces with external clients or field-based employees on technical matters as needed. Manages project risks, issues/problems, and activity progress to ensure project goals, e.g., deadline, scope and quality are achieved. Assists with problem resolution or risk mitigation as needed. May manage the integration of vendor/subcontractor tasks and track and review vendor/subcontractor deliverables, if appropriate for the project. May include customizing base products to meet client requirements, system integration with other .... or third-party products or consulting projects and engagements. Serves as liaison between technical and non-technical teams, in internal organizations as well as in client and vendor/subcontractor organizations to ensure all project targets and requirements are met. Delivers informational and decision-seeking presentations to technical and business groups in … and/or in client organizations.
Company Info	The future is forged around data-driven hyper-personalized experiences, and we bring together award-winning creativity, digital engineering, and technology acumen to bring this future to today's enterprises. We conceptualize, build, and manage digital products that are customer-centric and future-ready for over 130 leading companies, harnessing the power of experience design, data engineering, and advanced analytics. Our cross-functional teams of full-stack developers, application engineers, designers, technologists, and consultants are aligned to the latest cloud-native, disruptive, and, often, proprietary tools and accelerators.
	Bachelor's degree in computer science, management information systems or business administration or the equivalent combination of education, training, or
