Job Description	[Recruitment background] We are continually receiving new orders from existing clients, and we are in need of a project manager who will be responsible for launching and promoting the project. We are looking for someone to work with us as a leader in the future expansion of our business division. [Job summary] As the PM for the relevant project, as the person in charge of the entire project in the entire process of project initiation, planning, execution, monitoring and control, and closure, I lead the project members and build a relationship of trust with the customer. lead the project to success PM is not the type of PM who only manages numerical values such as progress and productivity management, but he or she is responsible for determining policies (or consulting with others) for individual quality checks, architecture, implementation methods, etc., using business requirements and technical skills as the backbone. I hope that you will be able to check the content created by [Assumed project] A new project for an IT service company that works with major telecommunications carriers and major EC companies. The expected size is a few to 30 people. You will promote your project by utilizing modern technologies such as Java/Web, Typescript, React, and AWS.
Company Info	[About our company] We are a Japanese subsidiary of a global IT firm that originated in China and has over 40,000 employees worldwide. Since our establishment in Japan in 2002, we have been developing consulting, IT services, R&D services, and BPO as our main businesses. Most of our projects are prime projects with end users, and we utilize our global know-how and advanced case studies to develop a wide range of projects, including large-scale system development centered on finance, manufacturing, and distribution, as well as Internet/cloud-based agile development. We have a track record of. Up until now, we have been expanding our business with offshore development as our core, but in the future, we will focus on providing high value-added services with the keyword "getting closer to our customers" in order to take it to a new stage. I will continue to do so. [Rewarding this position] Not only can you learn the latest trends in technology such as agile and cloud, but you can also expand your technical skills as there are many projects where you will be responsible for everything from application development to infrastructure construction. Since there are many prime projects, it is also possible to improve management skills such as direct interaction with customers and overall facilitation. Whether you are a specialist or a generalist, we can provide projects that suit your needs. [Career formation] Based on the ability evaluation, we will first evaluate the project in a fair and fair manner as a PM. After that, it is possible to step up from PM to specialist (senior PM, business knowledge specialist, etc.) or to department management as management.
