Location	Asia Japan Tokyo
Job Description	We will be responsible for the development and operation of a global platform. You will be responsible for a wide range of tasks, including full scratch and version upgrades of existing services, and development of new services, depending on your experience and preferences. It's an environment where engineers are required to proactively propose, plan, and implement improvements, and the ability to develop their own systems and globalization allows engineers to fully expand their careers. [Specific duties] ・Planning, development, and operation of the research community site "infoQ" ・Planning, development, and operation of questionnaire systems, systems for overseas surveys, and new services ・Collection of various data (social, POS data, etc.) and development of analysis tools ・Development and operation of large-scale data mining tools ・Planning, construction, and operation of business systems *You can leave a wide range of tasks to suit your experience and preferences, such as full scratch of existing services, version upgrades, and development of new services. I will! [Department] You will be assigned to the Systems Department. We have about 50 people, divided into teams based on products, and it is an environment where there are many mid-career employees. We also have foreign nationals (currently 9 people in attendance* from India, Indonesia, Lithuania, the Philippines, Bangladesh, etc.) who can take on challenges in a global environment.
Company Info	[Company characteristics] GMO Research was founded on April 1, 2002 as GMO Research Institute, Inc., and changed its name to GMO Research, Inc. after a merger in 2006. Currently, we are expanding our business mainly in Asia, including China, Southeast Asia, and India, and were listed on Mothers in 2014. GMO Research is a company that provides new value to the marketing process in Japan and Asia through advanced online research. The research platform we provide, packed with cutting-edge technology, contributes to the creation of smiles and excitement. such a future With the aim of achieving this goal, we would like to successively develop services that are needed by everyone around the world, including the marketing solution platform ``MarketObserver'' and the consumer panel ``ASIACloud Panel'' that operates in 16 countries. I'm here. Our main clients are major research companies and consulting firms, not only in Japan but also in several countries such as China and India. [Company culture] Because we have members from many different countries, it's a very open and flat workplace. In line with our human resources policy of "Let's respect each other," each employee has the spirit of respecting the opinions of others, so even if there are conflicting opinions, it is possible to have a constructive discussion on an equal footing. In addition, there are many members who like new things, and there is an atmosphere that welcomes challenges such as wanting to adopt new technology and try new things. [Working environment]

	・We recommend the use of flextime. Overtime hours average around 20 to 30 hours per month. ・You can dress as you like. ・We have prepared a rich menu of welfare benefits with the aim of creating an environment where employees can work with peace of mind over the long term. (Please see the information in the treatment/welfare section)
