Activated / Updated	2024-04-11 / 2024-04-25
Job Type	IT (PC, Web, Unix) - Back-End Engineer
Industry	
Location	Asia Japan Tokyo
Job Description	[Job Description] The company is developing a chat support system that utilizes AI. Over 400 companies have adopted the system, and in order to further scale up the service, they are now looking for a server-side engineer to strengthen their development structure. <Specific Job Description> - Handling customization projects for the company's own services - Service specification review/design/implementation/unit testing/release - Maintenance/renovation of existing services
Company Info	The company develops chat support systems using cutting-edge AI. When it was founded in 2011, it specialized in developing smartphone apps for carriers. Later, when a client asked them to develop an app with a chat function, they built their own chat server and started providing the service. As a result, the chat server was well received, so the company made a major shift in the direction of developing its own products with chat servers as the main focus. Currently, the company's main business is providing chat support services for corporate contact centers and local governments. One of these services is a service that allows insurance companies to make insurance claims via chat. As IT advances in various fields, the company is rapidly expanding its services. The company has many highly skilled engineers, and depending on the individual's wishes and skills, it is possible to learn cutting-edge AI technology. In addition, a flextime system and some remote work have been introduced. The company has an environment where employees can work flexibly and hone their skills.
