Job Type	IT (PC, Web, Unix) - Back-End Engineer IT (PC, Web, Unix) - Fullstack Engineer IT (PC, Web, Unix) - Front-End Engineer
Industry	
Location	Asia Japan Tokyo
Job Description	■Job Description You will be replacing existing services developed in PHP with Go language and developing new functions, leading the team. ・Backend development and operation of new products using Go language ・Promoting the migration project from PHP to Go ・Implementing architecture to achieve maximum results ・Member guidance and code review ■Development policy We want to replace the systems of existing services and be able to respond quickly and scalably to changes in business and technology. We aim to containerize and create microservices. ■Development structure We adopt an agile/scrum structure. After thoroughly defining requirements, we design, develop, test, and release. The teams are divided by function, and there are three: the web development team, the app development team, and the maintenance and operation team. There is no particular division of development responsibilities, and you can be involved in both existing and new development, and the development management team assigns development tasks. ■Recruitment background The web app team consists of four people including the CTO. The CTO also serves as the tech lead, but since there are multiple projects in progress, we are looking for someone to fill this position full-time. (Organizational Structure) CTO-(★Tech Lead)-3 members ■Development environment ・Languages: Go, PHP5, JavaScript ・Frameworks: Echo, CakePHP2 ・Libraries: jQuery, React ・Version control: Github ・Project management: Backlog ・Operational environment: AWS ・Server monitoring: New Relic, CloudWatch ・Test environment: GithubActions, AWS Amplify ・Communication: Slack (within the department), Chatwork (in-house) ■PC and devices ・Necessary devices provided ・OS can be selected (Windows/Mac) ・Model can be discussed ■Work environment ・Daily work hours can be selected, so you can choose from 9:00-18:00, 10:00-19:00, or 11:00-20:00. ・Remote work is implemented at the discretion of the leader. ・Staggered work hours are implemented. ・Meal parties are subsidized to stimulate internal communication.

	- We place importance on personality and our team consists of members who are gentle and easy to communicate with.
Company Info	We are a medical x SaaS company that develops products such as the patient card app "My Dentist" that facilitates communication between patients and doctors, based on "Apotool&Box for Dentist," the industry's only SaaS system that centrally manages patient reservations, reception, treatment, and payment at dental clinics. Since releasing "Apotool&Box for Dentist" in 2014, we have been steadily exploring the issues users face, and have been developing new products and adding features at least once a year, sticking to our own development methods! As a result of our efforts, the number of contracts has doubled in the three years since 2020, and we are now used by more than 2,300 dental clinics nationwide. There are more than 70,000 dental clinics nationwide. Our company, whose mission is to "promote healthy life expectancy" in Japan, still has many challenges to solve. From now on, we will enter our second founding period. We are stepping on the gas to rapidly increase our market share. In the engineering department, multiple projects are underway simultaneously, including expanding the functionality of existing products as well as developing new products. As our people and organization continue to grow, we are looking for a tech lead who can drive product quality improvement and business growth!
Qualifications	*Someone with JLPT Level 2 Japanese language ability or higher(MUST be able to adequately communicate in the workplace and understand work responsibilities in Japanese) *This position requires the person to currently be living in Japan. Required skills ・Experience from requirements definition to development/testing/release ・2+ years of Go language development experience ・3+ years of experience in server basic design, detailed design, and construction ・Experience leading a development team from a technical perspective Preferred skills ・Experience leading development in the startup phase ・Experience promoting replacement development projects ・5+ years of development experience in web languages (PHP preferred) ・3+ years of database development experience ・AWS experience Desired profile ・Someone who is highly motivated to continue learning new knowledge and technologies ・Someone who can always act while questioning ・Someone who can actively express their own opinions and ideas ・Someone who prefers to think from the user's and customer's perspective ・Someone who can respond flexibly to work according to the development situation ・Someone who is conscious of deadlines and can complete tasks with a sense of responsibility
