Job Detail

Position Title	【Tokyo/Fukuoka】Bridge Engineer（Japanese and Vietnamese）|Smartphone App Development / Remote Work◎ / Great Welfare
Recruiter Company	G Talent/Bizmates, Inc.
Company Name	Company name is private
Activated / Updated	2024-04-25 / 2024-04-25
Job Type	IT (PC, Web, Unix) - BrSE/Bridge SE
Industry	Internet Services/ISP (Internet Service Provider)
Location	Asia Japan Tokyo Asia Japan Fukuoka
Job Description	The company is developing its own products and services for customers not only in Japan but also in Vietnam and Bangladesh. You will be responsible for bridge SE to lead the project to success by acting as a bridge between local engineers and Japan. ・Responsibilities Confirmation of specifications for development projects contracted in Japan and a series of operations including development management, acceptance inspection, delivery, maintenance, etc. to overseas bases ・Communication with local engineers ・Requirement definition, design, development, testing, and operation ・Source code review, schedule and task management ・Test debugging and quality control ・Other general product management ・Progress monitoring and reporting ・Communication The company utilizes Slack to maximize team productivity by constantly sharing resources and supporting each other throughout the team. ・Testing in a Demo Environment The company's own services are thoroughly tested in a demo environment to ensure highly practical development. By sharing opinions with the entire team, they improve the quality of their services through trial-and-error. ・Job Satisfaction There are not only web systems but also application projects, so you can work on what you are interested in without hesitation. You can also take on the challenge of developing projects that incorporate the latest trends, such as new languages and architectures. ○Development Team Structure and Environment Currently, 4 persons are in charge of web systems and 2 persons are in charge of applications. (One of them is in charge of overall management.) Existing projects are mainly in PHP, but the most recent project is Rails development. For Android development, Kotlin is being used to replace Java, and Swift is being used for iOS development. They are encouraged to introduce and develop trendy technologies on their own. Also, they are very close to other departments, so they try to work closely with them, talking to them over the desk or directly with the person in charge. One of the company's unique features is its close physical proximity to other departments, which encourages interaction and close collaboration with those in charge both across the desk and in person. In addition, the company makes active use of communication tools such as Slack to ensure smooth communication. Developers proactively adopt new technologies on their own and work on projects in a constantly evolving environment. 【Ideal environment for developers】 ○Support for paid editors (e.g. RubyMine) Provides a smooth coding environment that improves developer productivity.

	○AWS and other test server verification available Exposure to the latest technology and support for technical challenges in projects ○Free development environment (earphones OK, remote OK, etc.) Values creativity and promotes a flexible development style. ○Healthy development environment (standing desk, balance ball, etc.) A comfortable office environment that also values physical health.
Company Info	A venture company in Fukuoka that develops smartphone applications and conducts web promotions. The "myApp" series, developed in-house, has surpassed 3.5 million downloads (as of April 2021) with no promotion! Using its unique growth hacking capabilities, the company contributes to the achievement of clients' goals. There is a branch office in Tokyo. Application business: Planning, development, and operation of smartphone applications Media business: Planning, development, and operation of smartphone media Client work business: Website planning, production, consulting, etc.
